

# README for MiG-29S + HARM BASIC TRAINING

This is a simple mission that requires some knowledge of the MiG-29S Fulcrum. You only have to download one addon – namely the Weapons Mod you can get here: <https://www.digitalcombatsimulator.com/en/files/3325726/> . In return you get HARMs on your Fulcrum and a wingman's to go hunt SAMs.

I recommend knowing where the launch override button or key is. When you get to air-to-ground mode, you'll need that activated first to get the OK to manually launch the HARMs. Best bet is to follow the steerpoints, use the RWR to align the jet with the SA-19 and fire 10-20 miles off. Make sure to tell your wingman to fire also.

Basically, we've got ground units trying to take a city, and before we can send in Su-24 Fencer fighter-bombers to take out some armored checkpoints you need to kill this SA-19. Too few Fencers to justify otherwise.

I do recommend getting the Russian to English cockpit mod here: <https://www.digitalcombatsimulator.com/en/files/2081947/>. I also would expect a birthday egg flying in the mission. But that's me.

**Good hunting! SLAVA UKRANI!**

PS: If you appreciate this mission, *please* pay attention to Eastern Europe!
