

Royal Australian Air Force

P-51D Mustang Livery Mega
Pack

README

By

Strider32

Installation

The livery folders may be installed into one of the following:

DCS World OpenBeta\Bazar\Liveries\P-51D

OR

C:\Users\ [USERNAME] \Saved Games\DCS.openbeta\Liveries\P-51D

Install location is up to the user's discretion. The liveries should work in both locations.

Notes

1. The folder labelled "*Australian Base*" **must** be installed alongside the liveries regardless. This folder is a common folder that controls serial numbers, RoughMets and various other textures. The package will not function as intended until this folder has been installed in the same location as the liveries.
2. If the livery folder for the P-51 doesn't exist within the Saved Games folder, users must create the folder destination with the exact spelling, capitalisation and path as above.

Troubleshooting

Q. Why do my liveries have missing textures?

A. Please read note 1.

Q. I don't want to install all of the liveries, will they still work?

A. They should still work, as long as the "Australian Base" folder has been installed.
