

Royal Australian Air Force

F/A-18C Hornet Livery Mega
Pack v2.0

README

By

Strider32

Installation

All of the livery folders need to be installed into the following:

C:\Users\ [USERNAME] \Saved Games\DCS.openbeta\Liveries\FA-18C_hornet

If the above path doesn't exist within the Saved Games folder already, users must create the folder destination with the exact spelling, capitalisation and path as above.

Notes

1. The folder labelled "*Australian Base*" **must** be installed alongside the liveries regardless. This folder is a common folder that controls serial numbers, patches and various other textures. The package will not function as intended until this folder has been installed in the same location as the liveries.
2. Two paint schemes are included within the pack which will update the default DCS World RAAF schemes. Please note that the in-game names have been updated to reflect the package's naming conventions as per below:

"Australian sqn 75" to "Australia No. 75 Sqn"

"Australian sqn 77" to "Australia No. 77 Sqn"

Should users choose not to use the updated default liveries, they can be safely removed by deleting the **"Australian 75th Squadron"** and **"Australian 77th Squadron"** folders.

3. To avoid any conflicts or errors, users will need to completely remove all the previous liveries from the Hornet Mega Pack v1.8 before installing v2.0.

Troubleshooting

Q. Why do my liveries have missing textures?

A. Please read note 1 & note 3.

Q. I don't want to install all of the liveries, will they still work?

A. They should still work, as long as the "Australian Base" folder has been installed.
