

# AH-64 Apache

This Helios profile requires Helios v.1.6.609... or higher.

Update changelog:

- \*The interface has now been adapted to the last update (implementation of the FCR).

- \*Revised on the CPG side LHG and RHG, switches are now animated and the bindings are set.

- \*To update, the profile must be reloaded and the images copied to the Helios folder.

- \*Multiplayer Single CPG profile also adjusted and this also needs to be reinstalled.

- \*Multiplayer Single PLT can still be used as there have been no changes to switches.

- \*The new interface will probably be implemented in the next version of Helios.

- \*Until then, the interface still needs to be copied from the interface folder.

- \*Video, Cage und ADV Switches are not implemented, but animated. These probably come in one

Another update in DCS at a later date...

I hope everything goes well and would be happy to receive a short feedback...

greeting
