

DCS F-4E Phantom II Voice Attack by Bailey

Intro

Hello and welcome to Bailey's VoiceAttack Profile for the DCS F-4E Phantom II! This VoiceAttack Profile (VAP) uses keybinds to make your voice commands into cockpit, Jester, and AI actions. Take your time, learn the aircraft, and then use the voice commands that you want to use to supplement how you fly. With use, this VAP can be second nature. There are over 13,000 ways to say the commands in this profile. Use the ones that feel most comfortable to you, even if it's just a handful. You can use VA as much or as little as you like. Good luck and have phun!

How to Install

1. Extract the file you downloaded with your personal flavor of zip software (winzip, winrar, etc.).
2. Open Voice Attack and Import the file called 'Bailey F-4E Phantom II vX.vap'. The 'X' denotes the version number. The higher the number, the more recent the version.
3. Drag the 'Kneeboard' folder into your 'C:\Users\<Username>\Saved Games\DCS' folder. It has most of the commands conveniently available to you. (Optional)
4. Start DCS and import the keybind file:
 - a. Go to the Control Options menu
 - b. Select "F-4E" from the dropdown
 - c. Single click any entry in the "Keyboard" column
 - d. Click the "Load Profile" button along the top of the menu
 - e. Find and select the "F-4E Pilot Keyboard.diff.lua" file you downloaded. You may have to check the "Folder Browser" button to easily navigate to it. Click OK.
5. Yay! You did it! You are ready to fly read the rest of the readme!

How to understand VoiceAttack and this VA Profile

To get the full benefit and understanding of this VAP, you will need to know how commands are made and written in VoiceAttack. Please search for and read the "Dynamic command sections" in the VoiceAttack program readme. Sure, you can use this profile without having read it, but you will get so much more out of it if you do! From this point forward, I will assume you have read the page or two of information about dynamic command sections. When I use dynamic command notation in the readme and kneeboard, it is for speech possibilities only. If you want to use this VAP with another VAP, take a look at "Global Profiles" in the readme too. There are times when a switch or button in DCS may not have discrete ON or OFF keybinds. In these cases, use common sense when you say, "Pitot heat toggle", "Pitot heat Off", or "Pitot heat On", for example. This VA profile does not directly track the state of your switches (or anything for that matter) in DCS. **You need the Paid version of Voice Attack for this profile.** Train your speech recognition at least 3 times for best results when using this profile. This profile is designed to acknowledge your commands with a beep. If you would like to disable the beep:

1. VoiceAttack > Edit Profile
2. Options
3. Profile Options > Profile Exec
4. Execute a command each time a phrase is recognized > Uncheck

Note: Saying "Abort abort abort" will stop all VA commands.

Commands

I recommend installing the kneeboard files for easy reference to available commands. You can create your own Quick Reference List from VA if you like (VA Readme).

The general types of commands in this VoiceAttack profile include:

- Cockpit Commands
- Crew Chief Commands
- Jester Commands
- Macro Commands
- Communications Menu Commands

Macro Commands

These are some commands I have added to make life a little easier:

Select station [1;2;3;4;5]	Select [all;inboard] stations
Select stations 1 and 5	Select stations 1, 2, 3, 4 and 5
Select stations 2, 3, and 4	Select wing stations
Select [middle;outboard] stations	Select stations 2 and 4
Unselect all stations	Tune channel [1..18]
Tune aux channel [1..20]	Tune frequency XXX
Tune frequency xxx decimal xx	Tune frequency decimal xx
Tune tacan xxx [xray;yankee]	[nav;vor;ils] xxx decimal xx
[nav;vor;ils] decimal xx	[nav;vor;ils] frequency xxx
Give me [mavericks;guns;gun pods]	Give me fox [1;2]
Give me [computer;ILS;VOR] navigation	Give me TACAN ILS navigation

Communications Menu Commands

Use these commands to navigate the DCS Communications menus. Make sure to unbind F11 and F12 in DCS if you use these.

F1-F12

Request ATC

Comm Reset

Countermeasure Utility

Use the command “set countermeasure program” to define your chaff and flare release programs.

1. Say “set countermeasure program”.
2. Use the VoiceAttack menu to define all 6 chaff and flare release parameters.
3. While in the F-4E cockpit, say “load countermeasure program” to load the program in the aircraft.
4. Loading is complete when you hear the end beep.

Outro

That’s about it for now. For those savvy Voice Attackers, there are some treats for you in the .VAP. For those who aren’t as savvy, just use what you got, and you’ll be fine! Thank you for downloading my VoiceAttack profile and I am sure we all look forward to what DCS and Heatblur will have in store for us! Feel free to contact me on Discord (Baileywa) or the ED forums (Bailey). Remember that comments, questions, critiques, and requests are always welcome! Please create, modify, combine and improve this VAP as you see fit. I encourage sharing with the DCS and VoiceAttack communities too! I look forward to being able to update this VAP alongside the development of the DCS F-4E Phantom II as much as I can.

~Bailey
