

# Syria Night Deep Strike

## MISSION BRIEF

**Situation:** Weeks ago, a NATO reconnaissance satellite captured several clear images of a well-defended infrastructure complex located 100 nm from the Syria–Iraq border, near the city of Deir ez-Zor. According to an undisclosed but reliable intel source, this complex is an underground WMD research facility funded by Saddam Hussein’s government. The 494th Fighter Squadron, deployed to Incirlik Air Base in support of Operation Northern Watch, has been tasked by CENTCOM to destroy this infrastructure complex.

**Mission:** Your mission today is to lead a three-ship F-15E package, callsign Remit, on a low-level night deep strike. The primary target is an underground research facility, designated TGT-1. The secondary target is a square-shaped complex, believed to be a weapons storage building, designated TGT-2.

**Threat:** Confirmed SAM sites include an SA-2 site west of Tal-Siman, an SA-3 site north of Tabqa, and an SA-5 site west of Deir ez-Zor Air Base. Additional IADS and AAA threats are expected. There will be no SEAD/DEAD packages available for this mission—it is too high-profile, and we do not want to risk all out war with Syria.

**Supporting aircraft:** 1xE-3A AWACS callsign Warlord, 1xKC-135 TANKER callsign Tango

**Comms:** PRI button 1 flight, button 2 awacs, button 3 tanker. SECONDARY button 1 tower

**Mission Notes:** Make sure you follow every waypoints, maintain 200AGL through WP3-WP8, at WP8 turn towards WP9 to take a .67 patch map on target(gain some altitudes if needed but not too high, 500-800ft is enough). Choose your loadouts at will but a double GBU-24s loft is highly recommended.

**Optional Skins:** Skin settings with NVG goggles mounted on helmet(external view) and static aircrafts in maintenance states(canopy open ladder down etc) are included.

Install: for F-15E skins: ....dcsworld
