<small>① MAPPED ONLY FOR TRIM (PINKIE ON ROY HAT.)</small>											

① MAPPED ONLY FOR TRIM/ PINKIE ON POV HAT !

Clutch and Pinkie won't act as buttons. Here, both are used as modifiers to extend the number of customizable inputs.

Commands marked by \*\*, \*\* or \*\* are assigned ingame. All axis are assigned ingame and most have custom curves.

Commands marked by \*\*\*, \*\*\* or \*\*\* are used for TrackIR and TeamSpeak, or Simple Radio. "Center TrackIR" don't interfere with the game as (Numpad5) centers either TrackIR or View in this profile. "TrackIR Pause" : (LCtrl+LShift+F1), "SPEAK" can also be changed according to your own TS settings, currently it is : (LCtrl+LShift+2).

\*DEFAULT BEHAVIOR IN MODES 1-2-3 (mouse left click will be a mouse left click, etc ...).

Remarks : Throttle slider is set with an incremental ingame curve which gives you 5 levels of zoom, this to avoid jittering which might happen on some x52s. This profile will evolve with my modifications but might have to be reworked if ED updates the A-10C.

Instructions : Copy DCS – A-10C.pr0 file to C:\Users\Public\Documents\SmartTechnology Profiles. Copy X52DCS-a10c-2.1-[keyboard-x52-...].diff file to your game directory, launch DCS and load the file from the key binding menu to the corresponding Aircraft [Keyboard-x52-...]. Setup. Copy the DCS\_NOiD.xml to C:\Users\XXXXXX\AppData\Roaming\NaturalPoint\TrackIR 5\Profiles.

Warning : Use this Profile only with the custom DCS key/Axis Config/TrackIR files provided. Else you'll have to remap the ingame Key/Axis, my setup is almost vanilla but there are differences (X52DCS-XXXXXX.diff).
